

Quick Start

First, download the DiveCert version of software for your required operating system from www.divecert.com.

Activating DiveCert

1. Once the download is complete, run the divecert-win.exe (version 3.6.2) installer and follow the instructions.
 - For mOS users, download the zip folder from the website and unzip the folder to your desired location.
2. After the installation is complete, 2 icons will have been placed on your desktop. DiveCert & Admin. Open the Admin application.
3. The loading screen will be displayed and then the database selection window. Highlight the local database and select continue.
4. The licence key activation window will open and display you with a Computer Specific ID. Copy this ID and email it to support@divecert.com. You will be then sent an activation Serial Code.
5. Enter the code you have been sent into the Serial Code box, located below the Computer Specific ID and select Verify.
6. The red cross that is displayed on the screen will turn into a green tick.

Connecting the Sample Database

1. Within the Admin Application select the database tab and unlock using the password: dive123cert456.
2. Click the + button at the bottom right of the scree, this will add an 'Untitled Database' to the database list.
3. Double click the 'Untitled Database' and change the information are required.
 - To connect to the sample database, click browns and point to the following location: C:\DiveCert\Sample Database\DM\database\ and select the db.rsd file.
 - Make sure the Default database check box is ticked.
4. Close the Application and you can open the DiveCert application.
